## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

### ***Rejections Withdrawn***

2. Applicant's arguments, see pg. 2-4, filed April 22, 2005, with respect to the rejections under 35 U.S.C. 102(b) have been fully considered and are persuasive. The rejection of claims 1-4 under 35 U.S.C. 102(b) has been withdrawn.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Brennan [US 5,474,796].
5. With respect to claim 1, Brennan teaches an invention comprising a method for conducting a large number of chemical reactions on a support surface where a pump deposits microdroplets of chemical reactant solution of 50 picoliter to 2 microliter volumes onto binding sites of 50-2000 microns in diameter (column 2, lines 15-20) using nozzle array heads (micropipettes) (column 8, lines 40-50). The reactions at the functionalized binding site may

form covalent bonds such as esters or amide bonds or may involve non-covalent specific binding reactions such as antibody/antigen binding or oligonucleotide specific binding (column 2, lines 23-30).

6. With respect to claim 2, Brennen teaches multiple nozzle array heads (column 8, lines 40-50).

7. With respect to claims 3-4, the pump deposits microdroplets of chemical reactant solution of 50 picoliter to 2 microliter volumes onto binding sites of 50-2000 microns in diameter (column 2, lines 15-20).
